bug(#4531): auto Phi formation in `vapplicationArgUnboundNext` #4552

Merged yegor256 merged 1 commit into `objectionary:master` from `h1alexbel:4531`

0crat commented on Sep 25

@h1alexbel Hey there! Nice work on the contribution – you've snagged **+4 points** this time around 🎯. Here's the breakdown: started with **+16** as your base, but had to dock **-8** since there wasn't any code review (that's a big one according to our policy), and another **-4** for keeping it lean with just **22** hits-of-code (we're looking for at least **40** to avoid that penalty). Your running balance is sitting pretty at **+313** – keep those contributions flowing and maybe grab a reviewer next time to maximize those points! Don't forget to peek at your **Zerocracy balance** too.
