Add our plugin to your GitHub repo — it instantly begins analyzing issues and pull requests, transforming your team's activity into actionable performance scores.

https://github.com/objectionary/eo/pull/4552

Using predefined rules and AI-powered judgment, our chatbot assigns points, explains each decision, and guides programmers to improve. Pricing is only a few dollars per month, based on data volume.

Fund your account and freelancers from anywhere start contributing — our AI manages micropayments, rewarding only tangible results, not résumés or promises.

We use Zerocracy to develop Zerocracy. Over the past 12 months, our freelancers have completed around 50 tasks per week. We pay an average of $20 per task—whether it's a merged pull request, a submitted bug report, or a resolved issue. Our codebase grows by approximately 4,000 hits-of-code per week, which means we effectively pay about $0.25 per line of code. For comparison, in a 2014 experiment, our cost per line was $0.13.

How much do you pay per line?

Result-based distributed teams are redefining software engineering —
and outperforming every traditional model.
